ABOUT

H4LO is a safety awareness device that alerts the user when there is a **risk of entrapment** or unintentional contact while operating a MEWP (Mobile Elevated Work Platform).

H4LO is **worn by the user** rather than a device fitted to the MEWP.

H4LO attaches to a specific safety helmet and **doesn't rely on the MEWP** having an additional safety device fitted.

The use of **MEWPs** can save time, make work at height more efficient, effective and safer than using traditional methods of access. Unfortunately, MEWP accidents do occur and fatality involving overhead crushing seems to be on the rise. H4LO is designed to provide a reliable sound and light warning to the operator, yet with the flexibility of using in any types of MEWP with no installation needed.

SPECIFICATIONS

FEATURES

BENEFITS

H4LO is worn by the user

Can be used on any MEWP regardless of age or brands.
No installation on MEWP needed

LED flashing lights

Can be seen from the ground, confirms the unit is active

Built in audible system

Alerts the user to overhead obstructions

Lithium-ion battery

42 hours between charges

USB built in charger

Global plug is available

Cost effective price

Less than 10% cost of MEWP alternative device

Movement sensor

Audible system goes to standby until movement is detected

IP 64 rated

Withstands dust particles and rain showers

Weight of H4LO and Helmet

Weighs 695g and is even lighter than some motorcycle or soldier helmets
