

Hermel - Write Up

Being the Safety personnel in a Construction firm and also a Naturopathic Medicine Student, it is my assignment to make sure that employees follow the health and safety regulations. I think my main contribution to the company as Safety personnel is to give them the knowledge through seminars and also to always remind them on what to do to become safe and healthy at all times. No one will get into an accident and fall ill which can help to avoid additional expenses in the company. The savings can be allocated to other projects for the workers' safety and health.

I also initiated a short video stream to remind them what happens to them if there is an accident and also if they are safe during working hours and then going home. I'll see to it that workers working in the workplace are healthy to avoid contamination of other diseases with their co-workers. Daily routine at workplace inspection and identify the hazards and risks, and provide corrective actions to prevent major accidents that may cause mortality.

I gave some recommendations as the safety personnel to the company about what to do for the benefit of the company and workers to make the working environment healthier and happy. I'll also make sure Occupational Safety and Health and legal compliance must be done by the company and monitored to avoid problems in the future.

That is my contribution to being a safety personnel in the construction company.
