

## **Ramon - Write Up**

Being in Qatar allowed me the opportunity to expand my capacity as I have gained more qualifications in becoming a HSE Professional at an international level and worked in many industries as a HSE Officer, Trainer and HSE Consultant. I was exposed and experienced in the operations of learning and development, construction, facility management, Hospitality, Process (Oil and Gas) and energy sector, Manufacturing, Plant and machine Servicing, Aviation, Infra Sector, Food Industry, Mercantile, Health Care, and etc.

In the past 12 Months, I was advocating continually for HSE Ownership transcending from the top management going to the level of the frontliners whom I am coaching. I was a mentor to starters and aspirants in the field of HSE introducing them to advocate for HSE ownership with the campaign called "I AM HSE" wherein I share the experience on how to devote and dedicate their careers to introduce the HSE Ownership at all levels. In addition, my students whom I have taught IOSH and NEBOSH courses in the past are now indulging in greener pastures in other countries and are still consulting me for upgrades. They are of different nationalities and career backgrounds who decided to take the path of a HSE professional. I continually communicate with them through social media via Facebook or LinkedIn where I have over 13,000 connections. On the other hand, many of my past colleagues are now motivated to garner the same qualifications as mine and I continually inspire them with my stories, social media presence, short pep talks and coaching meetups.

To sum it all, it is my vibrant personality, creativity, and enthusiasm that paved the way for me to connect and inspire others and I infused this in video production, training discussions and various mini-safety talks of different HSE related topics wherever I am.
